

PRESS RELEASE

Brussels, 28 November 2006

ETSOVista: THE FIRST EUROPEAN WIDE DATA TRANSPARENCY PLATFORM FOR THE INTEGRATED ELECTRICITY MARKET

ETSO (the Association of European Electricity Transmission System Operators) is pleased to launch today the ETSOVista platform. ETSOVista facilitates access to market information by all market participants and stakeholders. Access to ETSOVista's core market information services is free of charge and open to anybody who has a legitimate interest in Europe's evolving wholesale electricity market.

Please logon and register at : www.etsovista.org

This first phase of the ETSOVista platform makes available, for the first time, key operational and congestion management information about electricity transmission between Member States for the largest part of Europe's high voltage electricity transmission grid. The platform provides:

- an overview map of quasi-real-time physical flows,
- the exchange schedules per border per hour,
- the yearly, monthly and daily auction data per border, and
- the access rules and other documents.

The platform presented today is intended as a fully functional 'pilot' version facilitating constructive feedback on its presentation, content and usefulness from the market participants.

In addition to any useful improvements suggested by Users, the next phase of the project will extend the information already made available to the widest extent of the European grid.

ETSO's commitment to **ETSOVista** will facilitate open access to market related data for the European Integrated Electricity Market and therefore, we welcome any discussion with stakeholders interested in making their own data available to the market via this open platform.
